

## HD-DVR Lite

### High Definition Recording & Editing Suite With Overlay

**Only £7,995**

+ VAT & Delivery

#### High Definition Recording High Definition Live View With Overlay High Definition Playback With Overlay

The 3Dive HD-DVR Lite entry level system is the latest innovation in high definition recording with integrated high definition overlay.

With a simple to use record and stop operation the 3Dive HD-DVR Lite records the high definition video and high definition overlay to internal hard disk drive without any "downscaling" giving you the full benefits and potential of high definition recording.

The recorded video project(s) with overlay can then simply be copied to an external USB hard disk drive for viewing on the clients computer/laptop or burnt to Blu-ray disk using the internal Blu-ray disk drive.

Video projects can also be edited onboard prior to copying using the included Pinnacle high definition video editing software. This is a feature no other high definition recording system with overlay can currently offer in an all-in-one solution.

The high definition video with high definition overlay can be viewed on a computer or laptop running Microsoft Windows XP SP2 or Windows Vista using Microsoft Media Player or any other compatible media player.

The 3Dive HD-DVR Lite system has been designed as the first step into high definition recording where basic high definition overlay may also be required. Where ROV telemetry or 3rd party data overlay is also required, then our 3Dive HD-DVR Pro system is the solution. Please visit our website or contact us for further details.

- ✓ All-in-one portable unit for easy transportation
- ✓ 1080i and 720p HD live video view and recording with overlay
- ✓ Up to 50 hours continuous HD recording with overlay to internal 2 terra byte hard disk drives
